## WHO Checklist on Mental Health Legislation

This checklist has been developed by WHO staff, Dr Michelle Funk, Ms Natalie Drew, Dr Margaret Grigg and Dr Benedetto Saraceno, in collaboration with Professor Melvyn Freeman, WHO faculty member for legislation, with contributions from Dr Soumitra Pathare and Dr Helen Watchirs, also WHO faculty for legislation. It is derived from the WHO Resource Book on Mental Health Legislation, which has been prepared by the Mental Health Policy and Service Development Team, Department of Mental Health and Substance Abuse, World Health Organization.

## Introduction and how to use this checklist

This checklist is a companion to the WHO *Resource Book on Mental Health, Human Rights and Legislation*. Its objectives are to: a) assist countries in reviewing the comprehensiveness and adequacy of existing mental health legislation; and b) help them in the process of drafting new law. This checklist can help countries assess whether key components are included in legislation, and ensure that the broad recommendations contained in the Resource Book are carefully examined and considered.

A *committee* to work through the checklist is recommended. While an individual in, for example, the ministry of health, may be able to complete the checklist, this has certain limitations. First, no single person is likely to have all the relevant information that a well selected team would have. Secondly, different individuals or representatives of different groups are likely to have differing views on various issues. An evaluation committee that allows critical debate and the development of a consensus is invaluable. Although countries should decide for themselves on the composition of the committee, it is advisable to include a legal practitioner familiar with the various national laws, the governmental mental health focal point, representatives of service user and family groups, and representatives of mental health professionals, NGOs and different government departments. It is recommended that the process be led and mediated by an independent human rights and/or legal expert.

This checklist should generally *not be utilized without thoroughly studying the Resource Book itself*. A number of important items included in the checklist are explained in the Resource Book, and the rationale and different options for legislation are discussed. The Resource Book emphasizes that countries should make their own decisions about various alternatives and ways of drafting legislation as well as about a number of content issues. The format of this checklist allows for such flexibility, and aims to encourage internal debate; it thus permits countries to make decisions based on their own unique situations.

The checklist covers issues from a broad perspective, and many of the provisions will need to be fleshed out or elaborated upon with respect to details and country specifications. Moreover, not all provisions will be equally relevant to all countries due to different social, economic, cultural and political factors. For example, not all countries will choose to have community treatment orders; not all countries have provision for “non-protesting patients”; and in most countries, sterilization of people with mental disorders will not be relevant. However, while each country in its evaluative process may determine that a particular provision is not relevant, this determination should be made part of the checklist exercise. All provisions in the checklist should be considered and discussed carefully before it is decided that one (or more) of the provisions is not relevant to a country’s particular context.

The Resource Book points out that countries may have laws that affect mental health in a single statute or in numerous different statutory laws relating to areas such as general health, employment, housing, discrimination and criminal justice. Moreover, some countries utilize regulations, orders and other mechanisms to complement a statutory act. It is therefore essential, when conducting this audit, to collect and collate all legal provisions pertaining to mental health, and to make decisions based on comprehensive information.

The Resource Book makes it clear that drawing up or changing mental health legislation is a “process”. Establishing what needs to be included in the legislation is an important element of that process, and this checklist can be a useful aid to achieving this goal. Nonetheless, the objective of drafting a law that can be implemented in a country must never be separated from the “content”, and must always be a central consideration.

## WHO Checklist on Mental Health Legislation

For each component included in the checklist, three questions need to be addressed: a) Has the issue been adequately covered in the legislation? b) Has it been covered, but not fully and comprehensively? c) Has it not been covered at all? If the response is either (b) or (c), the committee conducting the assessment must decide on the feasibility and local relevance of including the issue, leading to the drafting of locally appropriate legislation.

This checklist does not cover each and every issue that could or should be included in legislation. This does not mean that other items are unimportant and that countries should not pursue them; however, for the sake of simplicity and ease of use, the scope of this checklist has been limited.

Legislative issue	Extent to which covered in legislation (tick one)	If (b), explain: • Why it is not adequately covered • What is missing or problematic about the existing provision  If (c), explain why it is not covered in current legislation (Additional information may be added to new pages if required)	If (b) or (c), explain how/whether it is to be included in new legislation (Additional information may be added to new pages if required)
